Article Structure

TITLE PAGE

Title. Concise and informative. Titles are often used in information-retrieval systems. Avoid abbreviations and formulae where possible.

Author names and affiliations. Please clearly indicate the given name(s) and family name(s) of each author and check that all names are accurately spelled. Present the authors' affiliation addresses (where the actual work was done) below the names. Indicate all affiliations with a lower-case superscript letter immediately after the author's name and in front of the appropriate address. Provide the full postal address of each affiliation, including the country name and, if available, the e-mail address of each author.

ABSTRACT

A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References should be avoided, but if essential, then cite the author(s) and year(s). Also, non-standard or uncommon abbreviations should be avoided, but if essential they must be defined at their first mention in the abstract itself.

Abstract, made in essay form consists of introduction, purpose, method, conclusion, written in 1 (one) paragraph, space 1, paragraph justify, 150-250 words, no numbering. Created in English.

Keywords

Consist of 3-5 relevant words/phrases

INTRODUCTION

State the objectives of the work and provide an adequate background, avoiding an unnecessarily detailed literature survey or a summary of the results.

RESEARCH METHOD

Provide sufficient detail to allow the reader to interpret the results, and to enable the work to be reproduced. Methods already published should be summarized and indicated by a reference: only relevant modifications should be described in detail.

RESULTS AND DISCUSSION

This section should clearly and concisely describe the results of your study. Explain the statistical analyses (if used). Provide visual representations of the data (tables, graphs) where appropriate, but make sure to reference and explain these in the text.

This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid excessive citations and discussion of published literature.

CONCLUSION

The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.
